

# Community-Based Participatory Research in Prisons and Jails

# Hello!

**We are Joshua Miller and  
Michael Brick**

You can find us at  
[@anotherpanacea](#) and  
[@michaelbrick](#)

# The Challenge

Researchers want to study incarcerated students and incarcerated students want to conduct research.

“

*Nothing about us without us*

# CBPR vs. PAR

- Defining the community by both population and indirect stakeholders.
- Not necessarily about action quite yet.
- Additional research methods (observation)

# Incarceration & IRB:

Facilities must approve research

Covert or unapproved research is likely to cause incarcerated research subjects serious harms.

Facilities don't approve research

In the name of "protecting" incarcerated individuals, facilities can and do deny access to researchers.

All researchers must be CITI trained

To conduct human subjects research, students must do CITI training, which can only be "formally" taken online

# Tablets v. In-Person

What are the effects of tablet-based higher education in prisons and jails compared to in-person instruction?

# Single sex vs. Co-ed Education in Prison

What are advantages  
and disadvantages of  
running co-ed courses  
in prison?

# Young Men Emerging

Does the youth unit  
experiment at the DC  
Jail improve  
employment and  
recidivism outcomes?
